

Docker Cookbook

Because so many services are involved in running the weague, self-contained docker images can be handy in replicating larger pieces of it at a time.

Postgres

Postgres is used by Akkoma for storage. Adminer (formerly phpMyAdmin) is a handy web interface for introspecting postgres.

```
services:
  postgres:
    image: postgres:17
    restart: unless-stopped
    environment:
      POSTGRES_DB: akkoma,
      POSTGRES_USER: akkoma,
      POSTGRES_PASSWORD: akkoma,
    volumes:
      - postgres:/var/lib/postgresql/data
    ports:
      - "5432:5432"
  adminer:
    image: adminer
    restart: unless-stopped
    ports:
      - "8080:8080"
volumes:
  postgres:
```
